Most of the information in this Owner's Manual applies to all UltraMount® applications. Differences between straight-blade, HTS, MVP PLUS and WIDE-OUT applications are called out in the text, or under separate headings, as required. Pages that apply only to one or the other are called out as either STRAIGHT BLADE, HTS, MVP PLUS or WIDE-OUT™ on the outside corner of the page heading.
Welcome to the growing family of WESTERN® snowplow owners.

This manual provides safety, operation and maintenance information for your new WESTERN snowplow. To keep your snowplow in good condition, read and understand this manual and follow its recommendations. Failure to do so may affect your warranty coverage.

When service is necessary, your local WESTERN outlet knows your snowplow best. Contact your snowplow outlet for maintenance, service or any other assistance you may require. We have enclosed a "Report Card" in your Owner's Manual packet for your use.

Your WESTERN snowplow FloStat® hydraulic unit has a serial number. Record this serial number on the Snowplow Owner Data Sheet at the front of this manual.

Before using your WESTERN snowplow, make sure your vehicle is equipped with all the vehicle manufacturer's and our required options for plowing.

Your WESTERN snowplow is a valuable investment. The best way to assure original equipment reliability and efficiency is to purchase only genuine Factory Original parts and accessories. "Will-fit" parts and accessories can alter your snowplow’s performance characteristics and may affect your product warranty.

Protect your investment by staying with the best—original WESTERN parts and accessories from your local WESTERN outlet.
SAFETY DEFINITIONS

⚠️ WARNING
Indicates a potentially hazardous situation, that if not avoided, could result in death or serious personal injury.

⚠️ CAUTION
Indicates a potentially hazardous situation that, if not avoided, may result in minor or moderate injury. It may also be used to alert against unsafe practices.

NOTE: Indicates a situation or action that can lead to damage to your snowplow and vehicle or other property. Other useful information can also be described.

WARNING/CAUTION & INSTRUCTION LABELS

Become familiar with and inform users about the warning/caution labels on the back of the blade and the instruction label on the headgear.

NOTE: If labels are missing or cannot be read, see your sales outlet.
SAFETY

Warning/Caution Label

**WARNING**
LOWER BLADE WHEN VEHICLE IS PARKED.
DO NOT EXCEED GVWR OR GAWR INCLUDING BLADE AND BALLAST.
REMOVE BLADE ASSEMBLY BEFORE PLACING VEHICLE ON HOIST.

**CAUTION**
READ OWNER'S MANUAL BEFORE OPERATING OR SERVICING SNOWPLOW.
TRANSPORT SPEED SHOULD NOT EXCEED 45 MPH.
FURTHER REDUCE SPEED UNDER ADVERSE TRAVEL CONDITIONS.
PLOWING SPEED SHOULD NOT EXCEED 10 MPH.
SEE YOUR SALES OUTLET/WEB SITE FOR SPECIFIC VEHICLE APPLICATION RECOMMENDATIONS.

Instruction Label

MOUNTING PLOW (ON)

**STEP 1**
After seating plow horns in receiver brackets, pull Handle UP. Shoe will lift off the ground.

**STEP 2**
Pull and hold Lock Pin out; then rotate Handle UP and release Lock Pin. Shoe will lift off the ground.

**STEP 3**
Plug in electrical connections. Repeat steps 1 and 2 for other side of plow.

**OR**

MOUNTING PLOW (OFF)

**STEP 1**
Pull and hold Lock Pin out; then rotate Handle DOWN and release Lock Pin. Shoe will be on the ground.

**STEP 2**
Push down top of Shoe; Shoe will be on the ground, Repeat steps 1 and 2 for other side of plow.

Multiple Pinch Points Label

**WARNING**

Multiple Pinch Points

WIDE-OUT™ Blades Only
(both sides)

Read Owner's Manual for complete instructions.

Lit. No. 44230, Rev. 08 9 May 1, 2009
SAFETY

SAFETY PRECAUTIONS

Improper installation and operation could cause personal injury, and/or equipment and property damage. Read and understand labels and the Owner's Manual before installing, operating or making adjustments.

⚠️ WARNING

Lower blade when vehicle is parked. Temperature changes could change hydraulic pressure, causing the blade to drop unexpectedly or damaging hydraulic components. Failure to do this could result in serious personal injury.

⚠️ WARNING

Do not exceed GVWR or GAWR including the blade and ballast. The rating label is found on the driver-side vehicle door cornerpost.

⚠️ WARNING

Remove blade assembly before placing vehicle on hoist.

⚠️ CAUTION

Read Owner's Manual before operating or servicing snowplow.

⚠️ CAUTION

Transport speed should not exceed 45 mph. Further reduce speed under adverse travel conditions.

⚠️ CAUTION

Plowing speed should not exceed 10 mph.

⚠️ CAUTION

See your WESTERN® outlet for application recommendations.
SAFETY

HYDRAULIC SAFETY

⚠️ WARNING

Hydraulic fluid under pressure can cause skin injection injury. If you are injured by hydraulic fluid, get medical attention immediately.

- Always inspect hydraulic components and hoses before using. Replace any damaged or worn parts immediately.

- If you suspect a hose leak, DO NOT use your hand to locate it. Use a piece of cardboard or wood.

FUSES

The WESTERN® electrical and hydraulic systems contain several automotive blade-style fuses. If a problem should occur and fuse replacement is necessary, the replacement fuse must be of the same type and amperage rating as the original. Installing a fuse with a higher rating can damage the system and could start a fire. Fuse Replacement, including fuse ratings and locations, is located in the Maintenance Section of this Owner's Manual.
SAFETY

PERSONAL SAFETY

- Remove ignition key and put the vehicle in park or in gear to prevent others from starting the vehicle during installation or service.

- Wear only snug-fitting clothing while working on your vehicle or snowplow.

- Do not wear jewelry or a necktie, and secure long hair.

- Wear safety goggles to protect your eyes from battery acid, gasoline, dirt and dust.

- Avoid touching hot surfaces such as the engine, radiator, hoses and exhaust pipes.

- Always have a fire extinguisher rated BC handy, for flammable liquids and electrical fires.

FIRE AND EXPLOSION

- WARNING

  Gasoline is highly flammable and gasoline vapor is explosive. Never smoke while working on vehicle. Keep all open flames away from gasoline tank and lines. Wipe up any spilled gasoline immediately.

Be careful when using gasoline. Do not use gasoline to clean parts. Store only in approved containers away from sources of heat or flame.

CELL PHONES

A driver's first responsibility is the safe operation of the vehicle. The most important thing you can do to prevent a crash is to avoid distractions and pay attention to the road. Wait until it is safe to operate Mobile Communication Equipment such as cell phones or two-way radios.
SAFETY

VENTILATION

**WARNING**
Vehicle exhaust contains lethal fumes. Breathing these fumes, even in low concentrations, can cause death. Never operate a vehicle in an enclosed area without venting exhaust to the outside.

**WARNING**
Vehicle exhaust contains lethal fumes. Breathing these fumes, even in low concentrations, can cause death. Never operate a vehicle in an enclosed area without venting exhaust to the outside.

**CAUTION**
Batteries normally produce explosive gases which can cause personal injury. Therefore, do not allow flames, sparks or lit tobacco to come near the battery. When charging or working near a battery, always cover your face and protect your eyes, and also provide ventilation.

Batteries contain sulfuric acid which burns skin, eyes and clothing.

Disconnect the battery before removing or replacing any electrical components.

NOISE

Airborne noise emission during use is below 70 dB(A) for the snowplow operator.
Vehicle application recommendations are based on the following:

- The vehicle with the snowplow installed must comply with applicable Federal Motor Vehicle Safety Standards (FMVSS).

- The vehicle with the snowplow installed must comply with the vehicle manufacturer's stated gross vehicle and axle weight ratings (found on the driver-side door cornerpost of the vehicle) and the front and rear weight distribution ratio. In some cases, rear ballast may be required to comply with these requirements. See Ballast Requirements section.

- WESTERN Selection List/Quick Match is based on available vehicle capacity for snowplow equipment on a representative vehicle equipped with options commonly used for plowing and with 300 lb of front seat occupant weight.

- Weights of front seat occupants can be adjusted above 300 lb but vehicle with snowplow must not exceed vehicle GVWR or GAWR.

- In some cases there may be additional limitations and requirements.

- Installation, modification and addition of accessories must comply with published WESTERN recommendations and instructions. Available capacity decreases as the vehicle is loaded with cargo or other truck equipment, or snowplow accessories are installed.

- If there is uncertainty as to whether available capacity exists, the actual vehicle as configured must be weighed.
VEHICLE APPLICATION INFORMATION

BALLAST REQUIREMENTS

Ballast (additional weight) is an important part of qualifying vehicles for snowplow eligibility. Rear ballast must be used when necessary to remain in compliance with axle ratings and ratios as specified by the vehicle manufacturer.

If ballast is required, it is important that it be secured properly behind the rear axle. A ballast retainer kit is available from your WESTERN® outlet (PN 62849).

NOTE: The ballast retainer kit is for snowplow vehicles requiring ballast. See your WESTERN outlet for the correct amount of ballast required. Include the weight of the retainer as part of the ballast requirement. Sand bags are recommended for use as ballast.
GETTING TO KNOW YOUR SNOWPLOW

UltraMount® SNOWPLOW

The UltraMount snowplow consists of all the components that are readily removable from the vehicle as a unit. This includes the blade, quadrant, lift frame, A-frame/T-frame, hydraulic unit and the NIGHTHAWK™ snowplow headlamps. The snowplow is ready and easy to mount when you need to plow snow. When plowing is completed, remove the snowplow.

UltraMount snowplows have through holes in the lower lift frame and stand leg. The holes will accept 1/2" trailer hitch pin locks, which are available at most auto supply or trailer equipment stores. These holes, used with locks, may be used to secure the snowplow assembly on or off the truck to deter theft.

The snowplow shall be installed according to instructions supplied. WESTERN® outlets are trained to provide this service and other services for this snowplow.
GETTING TO KNOW YOUR SNOWPLOW

There is no need to unhook the chains or the hydraulic hoses. When the lift frame is pinned to the stands and locked in place (see blade label or snowplow removal section of this manual), the complete UltraMount® snowplow can easily be moved around on most hard surfaces.

BLADES

WESTERN® snowplows with steel blades are constructed of heavy gauge steel. To increase rigidity and strength, the blades are reinforced with several vertical ribs. The top edges are formed for added strength and improved appearance.

WESTERN snowplows with poly blades are constructed of a high molecular weight polyethylene sheet that is supported with structural steel.

WESTERN blades have replaceable high-carbon steel cutting edges bolted to the bottom. Straight blade and WIDE-OUT™ cutting edges should be replaced when worn to the bottom edge of the blade. MVP PLUS™ cutting edges should be replaced when they are worn within 1" of the carriage bolts. (See Maintenance Section in this manual.)

Your new blade's steel components are protected with a baked-on ULTRAFINISH™ powder coat that resists cracking, corrosion, scratching and
rust. This coating—many times thicker than paint—will maintain its luster and glossy good looks. It can be touched up when necessary.

Blade guides are included with your complete snowplow. These help the operator to visualize the edges of the blade and aid in blade positioning.

**Straight Blades**

WESTERN® straight blades with their exclusive Roll-Action™ design roll snow ahead and to the side instead of just pushing snow. This action means you can move more snow and move it faster using less power, saving fuel and reducing wear and tear on both the vehicle and the snowplow.

Large, adjustable disc-type skid shoes are standard on some models. These rotate 360° for longer wear and better blade flotation over all surfaces. For severe service, heavy-duty disc shoes are standard on all PRO-PLOW® and PRO PLUS® snowplows.

**HTS™ Blades**

HTS, the half-ton snowplow. The HTS blade is a full-size, full-featured snowplow designed exclusively for half-ton pickup trucks. It handles standard-duty commercial, institutional and extended-use homeowner applications, providing rugged, pro-like performance without the extra weight. Available in 7-1/2' mild steel.

**MIDWEIGHT™ Blades**

The 7-1/2' MIDWEIGHT snowplow is a high-performance snowplow designed for personal and light commercial use. The MIDWEIGHT blade is available in ULTRAFINISH™ powder-coated steel or high-density polyethylene. The poly option offers exceptional snow-rolling action and a maintenance-free surface.

**PRO-PLOW Blades**

Leave it to the pros. Designed to meet the requirements of the professional snowplower, the 7-1/2' and 8' PRO-PLOW® models are available.
GETTING TO KNOW YOUR SNOWPLOW

in both ULTRAFINISH™ powder-coated steel and poly. The 8-1/2' model is offered in steel only.

**PRO PLUS® Blades**

Big, tough and built to last. Contractors continue to be impressed with the strength, durability and versatility of the PRO PLUS blade. Designed for heavy-duty commercial and light municipal applications, the 7-1/2', 8', 8-1/2' and 9' PRO PLUS line fits a wide range of vehicles, from 3/4-ton to F-550-size trucks.

**MVP PLUS™ Blades**

Each of the MVP PLUS blade wings has a trip edge. Heavy-duty compression springs hold each trip edge in the plowing position (2 springs per blade wing for 7-1/2' and 8-1/2', 3 for 9-1/2'). The springs are a safety device which allow the trip edge to rotate back and ride over obstacles such as low curbs, manhole covers, etc., without damaging the snowplow, vehicle, or injuring the driver. The trip springs need no adjustment and offer protection in all blade wing positions. Available accessories include a rubber deflector, bolt-on disc shoes, blade wing extensions, blade stops and a back drag edge.

**WIDE-OUT™ Blades**

The WESTERN® WIDE-OUT snowplow provides you the ability to extend the width of your blade hydraulically, allowing you to carry up to 40% more snow for increased plowing efficiency. Positions include a retracted 8' width, 10' expanded width and a scoop width of nearly 9' wide. The WIDE-OUT blade can fully angle in the scoop position, increasing the snow-carrying capacity while effectively maneuvering around obstacles or turning corners. Its dual power bar design and six vertical ribs provide exceptional strength, while the durable polyurethane cutting edge on each wing reduces wear and helps protect the blade while tripping. Available accessories include a rubber snow deflector, bolt-on shoe kit and a back drag edge.
GETTING TO KNOW YOUR SNOWPLOW

A-FRAME/T-FRAME, QUADRANT AND LIFT FRAME

Straight and WIDE-OUT™ Blades

The quadrant is attached to the back of the blade with heavy-duty trip springs and either bolts with locknuts or clevis pins with cotters. The trip springs allow the blade to trip forward and ride over obstacles such as low curbs, manhole covers, etc., without damaging the blade or the vehicle, or injuring the driver. See the Maintenance Section for Trip Spring Adjustment.

The quadrant is attached to the triangular A-frame with a pivot bolt. The pivot bolt allows the quadrant and blade to swing right or left.

The hydraulic unit is mounted on the front of the lift frame. The hoses remain connected to the hydraulic unit and the rams. The snowplow headlamps are also attached to the lift frame.

MVP PLUS™ Blades

The wings are attached to the T-frame with a hinge pin, which allows the wings to extend and retract.

The hydraulic unit is mounted on the front of the lift frame. The hoses remain connected to the hydraulic unit and the rams. The snowplow headlamps are also attached to the lift frame.
**GETTING TO KNOW YOUR SNOWPLOW**

**NIGHTHAWK™ SNOWPLOW HEADLAMPS**

![WARNING]

Your vehicle must be equipped with snowplow headlamps and directional lights.

The NIGHTHAWK snowplow headlamps include a set of rectangular, dual-beam, halogen headlamps plus combination park and turn signals. A prewired harness with a plug-in module requires no headlamp wire splicing. The headlamps conform to Federal Motor Vehicle Safety Standards (FMVSS).

When the electrical plugs are connected, the vehicle headlamps will automatically switch to the snowplow headlamps when they are turned ON. When the electrical plugs are disconnected, the headlamps will automatically switch to vehicle headlamps when they are turned ON.

Replacement parts are available through your local WESTERN® outlet.

**VEHICLE MOUNT**

Western Products has designed custom mounts for most vehicles. Due to differences between vehicle models, mounts are generally not interchangeable.

The mount is fastened to the underside of the vehicle frame and provides the primary connecting point between the snowplow and the vehicle.
FloStat® HYDRAULIC SYSTEM

The FloStat hydraulic unit delivers fast and uniform speed for lifting and angling. Straight blades are raised in approximately 2 seconds and angled side to side in approximately 4 seconds.

Straight Blades

The HTS™ hydraulic unit has blade scrape lock circuitry built into it. This feature resists the tendency a snowplow has to "float up" as

Attached to the mount are two removable receiver brackets. The receiver brackets are attached to the mount using pins and hairpin cotters. The receiver brackets are easily removed to provide even more road clearance during the non-plowing months of the year.
GETTING TO KNOW YOUR SNOWPLOW

larger amounts of snow build up in front of it while plowing deep snow, or stacking snow into piles. This feature is activated when the blade is in FLOAT, and is factory set. See your sales outlet for adjustment. The HTS blade is raised in approximately 4 seconds and angled side to side in approximately 3 seconds.

The MVP PLUS™ blade is both raised and angled side to side in approximately 2 seconds.

The WIDE-OUT™ blade is both raised and angled side to side in approximately 2 seconds. Each wing individually extends and retracts in approximately 2 seconds. Both wings together extend in approximately 4 seconds and retract in approximately 3 seconds.

For hydraulic fluid type and filling instructions, see Hydraulic System, Annual Fluid Change, in the Maintenance Section of this manual.

GETTING TO KNOW YOUR SNOWPLOW

System Capacity

- FloStat® Unit Reservoir ............. 1-3/4 quarts
- FloStat System Total..... 2-3/8 to 2-3/4 quarts

Pump Motor Specifications

Straight Blades

12-volt DC with +/- connection
1700–1800 psi pump relief valve
2500–4050 psi angling relief valve
4.5" dia 1.5 kW motor
.000477 gal/rev pump
Hydraulic hose SAE 100R1

HTS™ Blades

12-volt DC with +/- connection
1600–1700 psi pump relief valve
4000 psi angling relief valve
3" dia 0.8 kW motor
.000477 gal/rev pump
Hydraulic hose SAE 100R1

MVP PLUS™ Blades

12-volt DC with +/- connection
2200–2300 psi pump relief valve
4550–4650 psi plowing relief valve
3650–3750 psi back-dragging relief valve
4.5" dia 1.5 kW motor
.000652 gal/rev pump
Hydraulic hose 1/4 SAE 100R1 and 3/8 SAE 100R17

WIDE-OUT™ Blades

12-volt DC with +/- connection
2200–2300 psi pump relief valve
4000 psi plowing relief valve
1500 & 1700 psi wing plowing relief valves
4.5" dia 1.5 kW motor
.000652 gal/rev pump
Hydraulic hose 1/4 SAE 100R1 and 3/8 SAE 100R17
GETTING TO KNOW YOUR SNOWPLOW

CAB CONTROLS

⚠️ WARNING
To prevent accidental movement of the blade, always turn the ON/OFF switch to OFF whenever the snowplow is not in use. The control indicator light will turn off.

WESTERN® snowplows come equipped with one of two special controls: the CabCommand handheld control or a joystick-style control.

The MVP PLUS™ controls allow you to go from a V-plow, to a scoop, to a standard straight-blade snowplow, all at the touch of a button or single-lever movement.

The WIDE-OUT™ controls allow you to go from a retracted position to a scoop position, in addition to all the standard straight-blade positions, at the touch of a button.

Each control has its own ON/OFF switch with an indicator light to show when the control is powered up. Your vehicle ignition (key) switch controls a fused circuit that powers your cab control directly from the battery.

The ON/OFF switch on the cab control allows you to turn OFF the control and prevent blade movement even when the ignition switch is ON.

The control ON/OFF switch serves as an emergency stop if required.

All controls are protected by a replaceable fuse located in the under hood snowplow electrical system. See Fuse Replacement in the Maintenance Section of this Owner's Manual.

ACCESSORIES AND OPTIONS

SNOW DEFLECTOR

The optional snow deflector, available in poly (straight blades only) or reinforced rubber, helps keep snow off the windshield and away from the radiator. The deflector improves the Roll-Action™ feature and increases snowplow efficiency.

STRAIGHT BLADE RUBBER CUTTING EDGE

The rubber cutting edge is available for certain straight blade models only. It is made of resilient rubber compounds that allow for a longer lasting cutting edge. It adjusts easily to road surface irregularities without gouging and removes all types of snow, quickly and cleanly.

CURB GUARD KIT

Designed to fit on the ends of the cutting edges, these guards protect against scraping the bottom edge of the blade against curbs and sidewalks. The kit is available for straight blades and all MVP PLUS™ blades.

WING EXTENSION KIT

These optional wings add up to 30 percent more carrying capacity to your blade. The single-pin design allows for a quick and easy attach/detach; no installation required. These are available for the MVP PLUS (8-1/2' and 9-1/2' models only) and PRO PLUS® blades.

DIELECTRIC GREASE

Specially formulated to protect all your electrical connections in severe winter conditions, Western Products recommends all snowplow owners use dielectric grease on a regular basis.
MOUNTING SNOWPLOW TO VEHICLE

MOUNTING SNOWPLOW (ON)

⚠️ WARNING
Keep 8’ clear of the blade drop zone when it is being raised, lowered or angled. Do not stand between the vehicle and blade or directly in front of blade. If the blade hits you or drops on you, you could be seriously injured.

⚠️ WARNING
Inspect snowplow components and bolts for wear or damage whenever attaching or detaching the snowplow. Worn or damaged components could allow the snowplow to drop unexpectedly.

NOTE: Use dielectric grease to prevent corrosion on all connections.

- Remove the electrical plug and disconnect electrical plugs from storage position.
- Align vehicle receiver brackets with snowplow horns and drive vehicle slowly forward until snowplow horns fully seat inside receiver brackets.
- Turn vehicle ignition to "OFF" position.
MOUNTING SNOWPLOW TO VEHICLE

1. After seating snowplow horns in receiver brackets, pull handle up; shoe will lift off the ground.

2. Pull and hold lock pin out; then rotate handle UP and release lock pin. It must lock into UPPER hole. Stand hook must grip receiver pin.

3. Repeat steps 1 and 2 on other side of snowplow. (Not required for HTS™ blades.)

STRAIGHT BLADE
CabCommand HAND-HELD CONTROL

**WARNING**
To prevent accidental movement of the blade, always push button to switch the control OFF whenever the snowplow is not in use. The control indicator light will turn off.

1. Turn the vehicle ignition switch to the "ON" or "ACCESSORY" position.

2. Press the ON/OFF button on the control. The power indicator light glows red, indicating the control is ON. The power indicator light glows red whenever the control and the vehicle ignition switch are both ON and the electrical connections to the snowplow are completed.

The ON/OFF button operates as an emergency stop if required.

**Function Time-Outs**

All control functions, except LOWER/FLOAT, time out (stop) automatically after a period of time. This is to limit the amount of electrical energy required from the vehicle.

**NOTE:** If control function times out before desired blade movement is complete, release button and press again.
OPERATING YOUR SNOWPLOW

Automatic Shutdown

The control will automatically turn OFF after being idle for 20 minutes. To reactivate the control after a shutdown, press the ON/OFF button.

Smooth Stop

The control automatically allows the blade to coast to a stop when the button is released. This results in smoother operation, reduces the shock to the hydraulic system and increases hose and valve life.

Control Functions

Raise, Lower, Float, Angle

The four triangle-shaped buttons in the center of the control face, when pressed, will result in the blade movements described in the table.

<tr>
<td>FLOAT</td>
<td>Press LOWER button and hold for 3/4 second to activate this mode. FLOAT indicator light in upper left corner of control face will illuminate. Blade will lower to ground surface and follow contour of surface as it dips or raises. Function does not time out; however, control will shut down after 20 minutes of nonuse.</td>
</tr>
<tr>
<td>LEFT</td>
<td>Press RAISE button momentarily to cancel FLOAT. Angling left or right will interrupt (stop) the FLOAT function, but FLOAT will resume when angling is complete.</td>
</tr>
<tr>
<td>RIGHT</td>
<td>Press this button to angle the blade to the right. Function times out after 9.6 seconds.</td>
</tr>
</tbody>
</table>
STRAIGHT BLADE

1. Turn the vehicle ignition switch to the "ON" or "ACCESSORY" position.

2. Move control ON/OFF switch to the "ON" position. The power indicator light glows red, indicating the control is ON. The power indicator light glows red whenever the control and the vehicle ignition switch are both ON and the electrical connections to the snowplow are completed.

The ON/OFF switch operates as an emergency stop if required.

To prevent accidental movement of the blade, always move the ON/OFF switch to OFF whenever the snowplow is not in use. The control indicator light will turn off.

DO NOT hold control lever in RAISE, ANGLE LEFT or ANGLE RIGHT position after blade has reached desired position. To do so will use excess current and overheat components.
## Function Description of Operation

HTS™ CabCommand
HAND-HELD CONTROL

1. Turn the vehicle ignition switch to the "ON" or "ACCESSORY" position.

2. Press the ON/OFF button on the control. The power indicator light glows red, indicating the control is ON. The power indicator light glows red whenever the control and the vehicle ignition switch are both ON and the electrical connections to the snowplow are completed.

The ON/OFF button operates as an emergency stop if required.

Function Time-Outs

All control functions, except LOWER/FLOAT, time out (stop) automatically after a period of time. This is to limit the amount of electrical energy required from the vehicle.

NOTE: If control function times out before desired blade movement is complete, release button and press again.

WARNING

To prevent accidental movement of the blade, always push button to switch the control OFF whenever the snowplow is not in use. The control indicator light will turn off.
OPERATING YOUR SNOWPLOW

Automatic Shutdown

The control will automatically turn OFF after being idle for 20 minutes. To reactivate the control after a shutdown, press the ON/OFF button.

Smooth Stop

The control automatically allows the blade to coast to a stop when the button is released. This results in smoother operation, reduces the shock to the hydraulic system and increases hose and valve life.

Control Functions

Raise, Lower, Float, Angle

The four diamond-shaped buttons in the center of the control face, when pressed, will result in the blade movements described in the table.

HTS™ JOYSTICK CONTROL

**WARNING**
To prevent accidental movement of the blade, always move the ON/OFF switch to OFF whenever the snowplow is not in use. The control indicator light will turn off.

1. Turn the vehicle ignition switch to the "ON" or "ACCESSORY" position.

2. Move the slide switch on the side of the control to the "ON" position. The power indicator light glows red, indicating the control is ON. The indicator light glows red whenever the control and the vehicle ignition switch are both ON and the electrical connections to the snowplow are completed.

   The ON/OFF switch operates as an emergency stop if required.

**NOTE:** If control function times out before desired blade movement is complete, release the lever to the center position, then move back into the desired function.
Function Time-Outs

All control functions, except LOWER/FLOAT, time out (stop) automatically after a period of time. This is to limit the amount of electrical energy required from the vehicle.

NOTE: If control function times out before desired blade movement is complete, release the lever to the center position, then move back into the desired function.

Automatic Shutdown

The control will automatically turn OFF after being idle for 20 minutes. To reactivate the control after a shutdown, move the ON/OFF switch to OFF, then back to ON.

Smooth Stop

The control automatically allows the blade to coast to a stop when the lever returns to center position. This results in smoother operation, reduces the shock to the hydraulic system and increases hose and valve life.

Control Lever Movement

From the center position, the control lever can be moved in one of eight (8) directions to control various movements of the snowplow blade. To change from one movement of the blade to another, the control lever must be moved back to the center position before selecting the desired function. Whenever the lever is released, it should spring back into the center position to stop any blade movement.
Control Functions

Raise, Lower, Float, Angle

Moving the control lever in straight lines up and down or from side to side on the control body will result in the blade movements described in the following tables.

NOTE: If control function times out before desired blade movement is complete, release the lever to the center position, then move back into the desired function.

</tbody>
</table>

NOTE: If control function times out before desired blade movement is complete, release the lever to the center position, then move back into the desired function.
OPERATING YOUR SNOWPLOW

Wing Positions

Moving the control lever from the center position toward the word WING on either side of the face of the control body will cause either wing to move independently of the other as described in the following table.

NOTE: If control function times out before desired blade movement is complete, release the lever to the center position, then move back into the desired function.

<table>
<thead>
<tr>
<th>Function</th>
<th>Description of Operation</th>
</tr>
</thead>
<tbody>
<tr>
<td>L WING</td>
<td>Move the control lever toward the left side of LOWER on the control face to move the left wing. The first time the lever is moved into the slot after the control is turned ON or another function is used, the wing will extend. Repeated use of lever in the same slot, without using another function, results in movement in the opposite direction from the previous movement. Function times out after 3.0 (MVP PLUS™), 3.25 (WIDE-OUT™ – IN) or 3.75 seconds (WIDE-OUT – OUT).</td>
</tr>
<tr>
<td>R WING</td>
<td>Move the control lever toward the right side of LOWER on the control face to move the right wing. The first time the lever is moved into the slot after the control is turned ON or another function is used, the wing will extend. Repeated use of lever in the same slot, without using another function, results in movement in the opposite direction from the previous movement. Function times out after 3.0 (MVP PLUS), 3.25 (WIDE-OUT – IN) or 3.75 seconds (WIDE-OUT – OUT).</td>
</tr>
</tbody>
</table>
MVP PLUS™ BLADE POSITIONS

NOTE: For best road clearance during transport, place the blade halfway between the straight and retracted (vee) positions. The scoop position is NOT RECOMMENDED during transport.

The MVP PLUS snowplow can be used in five basic plowing positions.

**Straight Blade**

Move both wings to form a straight blade for wide path plowing or "stacking" snow.
Angled Blade

Move one wing "OUT" and the other wing "IN" to form an angled blade in either direction for general plowing and widening.

Retracted (Vee) Blade

Move both wings "IN" towards the vehicle for initial break through plowing and plowing paths or walkways.
**Scoop Blade**

Move both wings "OUT" away from the vehicle to form a scoop to "carry" snow with minimum spilloff.

**Dogleg Blade**

Move one wing to straight blade position and the other "OUT" to scoop blade position for clean up of windrows.
WIDE-OUT™ BLADE POSITIONS

The WIDE-OUT snowplow can be used in four basic plowing positions.

NOTE: Always transport the WIDE-OUT snowplow with both wings fully retracted.

Retracted Blade

Move both wings "IN" to form a straight blade.
Extended Blade

Move both wings "OUT" straight for an extra-wide blade for clearing large areas.

Scoop Blade

Move both wings "OUT" and ahead of the vehicle to form a scoop to "carry" snow with minimum spilloff.
Dogleg Blade

Move one wing to extended position and the other "OUT" to scoop blade position for clean up of windrows.
SNOWPLOW HEADLAMP CHECK

With all electrical plugs connected, check the operation of vehicle and snowplow headlamps.

<table>
<thead>
<tr>
<th>Lights</th>
<th>Results</th>
</tr>
</thead>
<tbody>
<tr>
<td>Parking Lamps</td>
<td>Both vehicle and snowplow lamps should be ON.</td>
</tr>
<tr>
<td>Right Turn Signal</td>
<td>Both vehicle and snowplow lamps should be ON.</td>
</tr>
<tr>
<td>Left Turn Signal</td>
<td>Both vehicle and snowplow lamps should be ON.</td>
</tr>
</tbody>
</table>

Connecting and disconnecting the electrical plugs should switch between the vehicle and snowplow headlamps as follows:

- Electrical plugs DISCONNECTED – Vehicle headlamps function normally.

- Electrical plugs CONNECTED – Vehicle headlamp functions transfer to the snowplow headlamps. On some DRL systems, both the vehicle and snowplow headlamps will function.

Aiming the Headlamps

- Aim the snowplow headlamps with the snowplow mounted and raised in the transport position. See Aiming Headlamp Beams in the Maintenance section for instructions.

- Aim the vehicle headlamps with the snowplow removed from the vehicle.
DISC SHOE ADJUSTMENT

**WARNING**
Blade can drop unexpectedly. Place blade on jack stands. Failure to do so could result in serious personal injury.

**Recommended Shoe Adjustments**

For gravel surfaces: The bottom surface of the shoe should be 1/4"–1/2" below the cutting edge.

For hard surfaces (concrete or asphalt): The bottom surface of the shoe should be even with the cutting edge.

---

**Actual configuration varies by model**

- Shoe Hole
- Linchpin
- Washers
- Spacer
- Disc Shoe
- Straight Blade

**Optional MVP PLUS™ & WIDE-OUT™ Disc Shoe Kit**

- Shoe Holder
- Washers
- Linchpin
- Disc Shoe
Adjustment Procedure

1. Raise the blade 1' off the road surface, turn the control OFF, and from in front of the blade, place jack stands or sturdy blocking under the cutting edge.

2. Turn the control ON and lower the blade onto the jack stands or blocking. Turn the control and vehicle ignition OFF.

3. Remove the linchpin, and slide the disc shoe down and out of the shoe hole (straight blades) or shoe holder (MVP PLUS™ and WIDE-OUT™ blades).

4. Remove one or more washers from the shoe stem, and reinstall the shoe into the shoe hole/holder.

5. Place the removed washers onto the shoe stem above the shoe hole/holder.

6. Reinstall the linchpin.

7. Turn the vehicle ignition to the "ON" position, and turn the control ON. Raise the blade slightly from the jack stands. Turn the control OFF, and remove the jack stands.

8. Stand 8' clear of the blade drop zone when checking the height adjustment of the cutting edge to the road surface.
HYDRAULIC SYSTEM

The FloStat® hydraulic unit's valve manifold includes relief valves to prevent damage to the blade or vehicle if an obstacle is hit at either end of the blade. The valves are preset at the factory and do not need any adjustments unless the valve manifold is serviced. When force against the blade causes the pressure in an extended ram to exceed set limits, the relief valve opens allowing fluid to escape and the ram retracts.

For hydraulic fluid type and filling instructions, see Hydraulic System, Annual Fluid Change, in the Maintenance Section of this manual.
OPERATING YOUR SNOWPLOW

BLADE DROP SPEED ADJUSTMENT

⚠️ WARNING

Keep 8’ clear of the blade drop zone when it is being raised, lowered or angled. Do not stand between the vehicle and blade or directly in front of blade. If the blade hits you or drops on you, you could be seriously injured.

The quill in the valve manifold adjusts the blade drop speed.

1. Lower the blade to the ground before making adjustment.

2. Turn the quill IN (clockwise) to decrease drop speed. Turn the quill OUT (counterclockwise) to increase drop speed.
NOTE: To access the quill on the MVP PLUS™ or WIDE-OUT™ hydraulic unit, raise top cover retainer, remove bottom cover retainer and remove side cover.

3. Stand 8' clear of the blade drop zone when checking adjustment.

4. On the MVP PLUS and WIDE-OUT units, replace cover and reinstall top and bottom cover retainers.
OPERATING YOUR SNOWPLOW

TRANSPORTING SNOWPLOW

⚠️ WARNING
Position blade so it does not block headlamp beam.
Do not change blade position while traveling. You could suddenly lower blade accidentally.

⚠️ CAUTION
Transport speed should not exceed 45 mph. Further reduce speed under adverse travel conditions.

NOTE: For MVP PLUS™ blades, use care when driving or entering driveways with the snowplow in the retracted (vee) position. The outer ends of the cutting edges could contact the ground.

NOTE: Always transport the WIDE-OUT™ snowplow with both wings fully retracted.

These instructions are for driving short distances to and from plowing jobs. Remove the snowplow from the vehicle for long trips and place in pickup box. The lift arm hook can be used as an attaching point to lift and move the snowplow following recommended mechanical lifting cautions and procedures.

1. Completely raise the blade.
2. Adjust the blade height for maximum snowplow headlamp illumination.
3. Adjust the blade to the straight position.
4. Turn the control OFF to lock blade in place.

NOTE: Overheating is unlikely under normal driving conditions, but occasionally the snowplow may be positioned where it deflects air away from the radiator. If this occurs, stop the vehicle and raise, lower or angle the snowplow slightly to correct overheating.

NOTE: Only the driver should be in the vehicle cab when the snowplow is attached.
OPERATING YOUR SNOWPLOW

DRIVING AND PLOWING ON SNOW AND ICE

⚠️ CAUTION

Drinking then driving or plowing is very dangerous. Your reflex, perceptions, attentiveness and judgement can be affected by even a small amount of alcohol. You can have a serious or even fatal collision if you drive after drinking. Please, do not drink and then drive or plow.

Refer to vehicle owner's manual instructions for driving in snow and ice conditions. Remember when you drive on snow or ice, your wheels will not get good traction. You cannot accelerate as quickly, turning is more difficult and you will need longer braking distance.

Wet and hard packed snow or ice offers the worst tire traction. It is very easy to lose control. You will have difficulty accelerating. If you do get moving, you may have poor steering and difficult braking which can cause you to slide out of control.
OPERATING YOUR SNOWPLOW

Here are some tips for driving in these conditions:

- Drive defensively.
- Do not drink, then drive or plow snow.
- Plow or drive only when you have good visibility for operating a vehicle.
- If you cannot see well due to snow or icy conditions, you will need to slow down and keep more space between you and other vehicles.

- Slow down, especially on higher speed roads. Your headlamps can light up only so much road ahead.
- If you are tired, pull off in a safe place and rest.
- Keep your windshield and all glass on your vehicle clean to see around you.
- Dress properly for the weather. Wear layers of clothing, as you get warm you can take off layers.
OPERATING YOUR SNOWPLOW

PLOWING SNOW

⚠️ WARNING
Never plow snow with head out the vehicle window. Sudden stops or protruding objects could cause personal injury.

⚠️ CAUTION
Wear a seat belt when plowing snow. Hidden obstructions could cause the vehicle to stop suddenly resulting in personal injury.

⚠️ CAUTION
Flag any obstructions that are hard to locate under snow to prevent damage to product or property.

⚠️ CAUTION
Never stack snow with the blade angled. This could damage the snowplow or the vehicle bumper.

⚠️ CAUTION
Plowing speed should not exceed 10 mph.

NOTE: Only the driver should be in the vehicle cab when the snowplow is attached.

General Instructions

1. Before plowing, make sure you know of any obstructions hidden beneath the snow such as bumper stops in parking lots, curbs, sidewalk edges, shrubs, fences or pipes sticking up from the ground. If unfamiliar with the area to be plowed, have someone familiar with the area point out obstacles.
2. If possible and you have good visibility, plow during the storm rather than letting snow accumulate.

3. Do not exceed 10 mph (16 km/h) when plowing snow.

4. When you are stacking snow, begin raising the blade as you come close to the stack. This will let the blade ride up the stack.

**Hard-Packed Snow**

1. Raise the disc shoes so that the cutting edge comes into direct contact with the pavement.

2. Use lowest gear to place maximum power behind cutting edge.

3. An angled blade is more effective for removing hard-packed snow.

**Deep Snow**

1. For straight blades, shear off top layers by plowing with the blade raised 3 to 4 inches for the initial pass. For MVP PLUS™ blades, move the blade into the fully retracted (vee) position and make an initial pass.

2. Bite into the edges using only partial blade width until job is cut down to size for full blade plowing.

   Rule of thumb:
   - 6" of snow — plow with entire blade width;
   - 9" of snow — plow with 3/4 blade width;
   - 12" of snow — plow with 1/2 of the blade.

   For WIDE-OUT™ blades in Scoop position, plow all depths with entire blade width.

   Experience and "feel" are the best guides.

3. When plowing deep snow, be sure to keep vehicle moving.
4. Ballast is suggested for maximum traction. Secure ballast behind the rear wheels. Do not exceed vehicle's GVWR and GAWR.

5. For increased traction use tire chains where legal.

Clearing Driveways

1. Head into the driveway with the blade angled and plow the snow away from any buildings. Widen driveway by rolling snow away from any buildings.

2. If a building is at the end of the driveway, plow to within a vehicle length of the building. Push as much snow as possible off the driveway.

3. With a raised blade, drive through remaining snow to building. Drop blade and "back drag" snow away from the building at least one vehicle length. Repeat if necessary.

4. Back vehicle to the building and plow forward, removing the remaining snow from the driveway. Check municipal ordinances for proper disposal of snow.

Clearing Parking Lots

1. Clear areas in front of buildings first. With blade raised, drive up to the building. Drop blade and "back drag" the snow away from building. When snow is clear of the buildings, turn the vehicle around and push snow away from the buildings towards outer edges of lot. Back drag edges are available as an accessory for select snowplow models.

2. Plow a single path down the center in the lengthwise direction.

3. With the blade in the scoop, angle or dogleg position, plow successive strips lengthwise until the area is cleared and snow is "stacked" around the outer edges.

4. If snow is too deep to clear in above manner, clear main traffic lanes as much as possible.
OPERATING YOUR SNOWPLOW

PARKING WITH SNOWPLOW ATTACHED

⚠️ WARNING

Lower blade when vehicle is parked. Keep 8' clear of blade drop zone. Temperature changes could change hydraulic pressure, causing the blade to drop unexpectedly or damaging hydraulic components. Failure to do this could result in serious personal injury.

Whenever you park your vehicle, completely lower the blade to the ground.

TOWING DISABLED OR STUCK VEHICLE

Do not use any snowplow components as an attaching point when retrieving, towing or winching a disabled or stuck vehicle.
REMOVING SNOWPLOW (OFF)

⚠️ WARNING
Keep 8' clear of the blade drop zone when it is being raised, lowered or angled. Do not stand between the vehicle and blade or directly in front of blade. If the blade hits you or drops on you, you could be seriously injured.

⚠️ WARNING
Inspect snowplow components and fasteners for wear or damage whenever mounting or removing the snowplow. Worn or damaged components could allow the snowplow to drop unexpectedly.

⚠️ CAUTION
Store PRO PLUS® and PRO-PLOW® A-frame in a horizontal position. This will prevent water from collecting and freezing in shock absorber.
During the off-season, the control can be removed. Disconnect the connector in the cab and store the control in the glove box of the vehicle.

- Drive vehicle to desired snowplow storage location.

- Adjust straight and WIDE-OUT™ blades to the straight position or MVP PLUS™ blades to the fully retracted (vee) position.

- Lower blade to ground.

- Turn vehicle ignition to "OFF" position.

⚠️ CAUTION

On 2-plug electrical systems, plug covers shall be used whenever snowplow is disconnected. Vehicle Battery Cable is 12-volt unfused source.

1. After lowering blade and turning control OFF, disconnect the electrical plugs.
2. Pull and hold lock pin out; then rotate handle DOWN and release lock pin. It must lock into LOWER hole.

3. Push down top of shoe; shoe will be on the ground. Repeat steps 2 and 3 on other side of snowplow (not required for HTS™ blades). Back vehicle away.
NOTE: After each use of the snowplow, reapply dielectric grease to the electrical plugs to maintain the protective coating on the terminals.

NOTE: Place electrical plugs in storage position. The driver-side and center plug on 3-plug electrical systems are joined for storage. The passenger-side and 2-plug systems are equipped with plug covers.
MAINTENANCE

AIMING HEADLAMP BEAMS

Tighten headlamp fasteners to 45 ft-lb once correct visual aim is achieved.

1. Place vehicle on a level surface 25 feet in front of a matte-white screen, such as a garage door. The screen should be perpendicular both to the ground and to the vehicle centerline.

2. The vehicle should be equipped for normal operation. The snowplow blade should be in place and in raised position. Below are steps listed by the Society of Automotive Engineers (SAE) pertinent to headlamp aiming in specification #SAE J599d.

3. Prepare vehicle for headlamp aim or inspection. Before checking beam aim, the inspector will:
   a. Remove ice or mud from under fenders.
   b. Set tire inflation pressures to the values specified on vehicle information label.
   c. Check springs for sag or broken leaves.
   d. See that there is no load in the vehicle other than the driver and ballast as specified in the Selection List.
   e. Check functioning of any automatic vehicle leveling systems and specific manufacturer's instructions pertaining to vehicle preparation for headlamp aiming.
   f. Clean lenses.
   g. Check for bulb burnout and proper beam switching.
   h. Stabilize suspension by rocking vehicle sideways.
4. Mark (or tape) the vertical centerline of the snowplow headlamps and the vertical centerline of the vehicle on the screen. Mark the horizontal centerline of the snowplow headlamps on the screen (distance from ground to snowplow headlamp centers).

5. Align the top edge of the high intensity zone of the snowplow lower beam below the horizontal centerline and the left edge of the high intensity zone on the vertical centerline for each snowplow headlamp. (Refer to diagram below.)
PRESEASON CHECK

⚠️ WARNING

Lower blade when vehicle is parked. Keep 8' clear of blade drop zone. Temperature changes could change hydraulic pressure, causing the blade to drop unexpectedly or damaging hydraulic components. Failure to do this could result in serious personal injury.

Before the snow season, check your equipment to make sure it's in working condition. Here are some tips for getting your equipment ready:

- Clean and tighten all electrical connections and coat with dielectric grease to prevent corrosion.

- Check hydraulic system for leaks and cracked or damaged hoses.

- Drain hydraulic system and refill with recommended hydraulic fluid. For hydraulic fluid type and filling instructions, see Hydraulic System, Annual Fluid Change, in this section of the manual.

- Replace worn or damaged parts.

- Check all mounting points and tighten fasteners, on both snowplow and vehicle. Verify all cotter pins are in place.

- Repaint blade assembly and attachments, as necessary, to protect the metal.

- Install auxiliary and flashing lights for compliance and visibility in accordance with local regulations.

- Check headlamps, auxiliary lights, heater and windshield wipers for proper operation.

- Inspect and test your battery. Recharge or replace as necessary.
• Ballast may be necessary, or beneficial, on some vehicles to provide maximum traction, braking and handling.

• Any ballast material (such as sand and blocks) must be solidly secured to the vehicle preventing it from moving under harsh plowing conditions.

POSTSEASON MAINTENANCE

CAUTION
Servicing the MVP PLUS™ trip springs without special tools and knowledge could result in personal injury. See your authorized WESTERN® outlet for service.

NOTE: Coat all electrical connections with dielectric grease.

• Clean and paint blade and components as needed.

• Always store MVP PLUS snowplow with blades in retracted (vee) position. This exposes the minimum amount of angle ram rod, and captures the least amount of hydraulic fluid in the system.

• Be sure lift ram is fully collapsed so the rod is not exposed. (Not required for HTS™ blades.)

• Apply general purpose petroleum grease to exposed chrome surfaces of the rams to prevent rust.

• Lubricate all pivot points (for example, stand lock pin assembly and lower spring anchor) with general purpose petroleum grease.
Your WESTERN® snowplow is designed for rugged, dependable service. Though, like the vehicle on which it is mounted, it needs regular care and maintenance.

---

**WARNING**

Lower blade when vehicle is parked. Keep 8' clear of blade drop zone. Temperature changes could change hydraulic pressure, causing the blade to drop unexpectedly or damaging hydraulic components. Failure to do this could result in serious personal injury.

---

Check the following before and frequently during the plowing season:

1. Make sure all fasteners, mounting bolts and hydraulic connections are tight. Pay particular attention to pivot plate fasteners and the 1" pivot bolt.

2. Make sure all electrical connections including grounds are clean, tight, free of rust or corrosion and are coated with dielectric grease.
3. Check all plugs and seals for hydraulic fluid leaks. Repair as necessary.

4. Replace the cutting edge when it is worn to the bottom of the blade.

**MVP PLUS™ Cutting Edge**: To equalize wear, refer to the leveling adjustment procedure in the following cutting edge section.

5. **Straight Blade and WIDE-OUT™ Trip Spring Adjustment**: To adjust trip spring tension, adjust the eyebolts located at the top of the blade. Loosen the locknut (nut closest to the spring), and tighten the adjusting nut (nut farthest from the spring) until the coils begin to separate. When tension is properly adjusted, a sheet of paper should pass between the second and third coils. When the proper tension is reached, tighten locknut.

6. **Blade Finish**: If the powder-coated finish is nicked or scratched, repair the surface and paint with WESTERN® red or black paint in aerosol or quart can.

**LIFTING**

The front of the lift frame can be used as an attaching point to lift and move this snowplow following recommended mechanical lifting cautions and procedures.
MVP PLUS™ CUTTING EDGE WEAR and LEVELING ADJUSTMENT PROCEDURE

After the snowplow has been installed on the vehicle in the correct configuration, a fine adjustment can be made to bring the cutting edges of the snowplow in full contact with the ground across the entire cutting edge. This adjustment feature should be used as the cutting edges begin to wear in order to maintain an even wear pattern across both cutting edges and provide good scraping action.

1. Snowplow must be installed on a properly ballasted vehicle, in the correct configuration.

2. Vehicle and snowplow must be on a level surface.

3. If the optional shoe kit has been installed on the blade, remove the shoes during this adjustment procedure.

4. Place blade wings in scoop position on the ground with no tension on lift chains.

5. Remove the rear pushbeam to T-frame fasteners. Loosen the front fasteners and allow the blade to find a level position.
6. Select the hole in the rear of the T-frame that is best aligned with the rear hole in the push beam and reinstall the rear fasteners. Tighten all four fasteners to 250 ft-lb.

7. Raise and lower the blade several times. The cutting edge should be contacting the level surface across the full length of the cutting edge.

8. Verify that the cutting edges remain in full contact with the ground while the wings are shifted from the scoop position to the retracted (vee) position. Reinstall blade shoes if removed in Step 3.

Complete this procedure as often as required to provide even cutting edge wear. Replace the cutting edge(s) on your MVP PLUS™ blade when worn to within 1" of the carriage bolts.
MAINTENANCE

HYDRAULIC SYSTEM

Fluid Level

⚠️ CAUTION
Do not mix different kinds of hydraulic fluid. Some fluids are not compatible and may cause performance problems and product damage.

NOTE: On MVP PLUS™ and WIDE-OUT™ blades, add fluid only when all rams are retracted.

NOTE: Remove fill plug slowly to relieve any pressure in reservoir.

With the UltraMount® system snowplow attached to the vehicle, activate control. For straight blades, any angle will do, but for MVP PLUS and WIDE-OUT blades, move blade wings to fully retracted (vee) position. Activate control FLOAT function and manually collapse lift ram all the way. Turn OFF control. Remove the fill plug. Fill reservoir to top of fill hole and replace fill plug.
For fluid recommendations see the following Annual Fluid Change Section.

For the HTS™ series, lower the blade to the ground. Turn OFF the control. Remove the fill plug. Fill the reservoir to within 1" of the top of the fill hole. Replace the fill plug.
MAINTENANCE

Annual Fluid Change

⚠️ CAUTION
Change the fluid at the beginning of each plowing season. Failure to do this could result in condensation buildup during the non-snowplow season.

⚠️ CAUTION
Do not mix different kinds of hydraulic fluid. Some fluids are not compatible and may cause performance problems and product damage.

1. Perform this operation with the snowplow attached to the truck on a hard level surface.

2. Lower blade to ground.

3. Activate control FLOAT function and manually collapse lift ram all the way (not required for HTS™ blades). Turn control OFF.

4. Remove the drain plug located in the bottom of the hydraulic reservoir for straight blades, or the drain cap located on the fitting side of the hydraulic unit for MVP PLUS™ and WIDE-OUT™ snowplows. (See illustrations on the previous page.)

5. Completely drain reservoir and replace drain plug/cap.

6. Carefully note hose routing and positions of any protective hose wraps for proper reassembly.

7. Remove the angle ram hoses from the fittings on the hydraulic unit and place in a drain pan or suitable container. (See the following illustrations and Hydraulic Hose or Fitting Replacement instructions.)

NOTE: Loosen fill plug slowly to relieve any pressure in the reservoir.
8. Manually angle the blade fully in each direction to remove fluid from the angle rams. Do not allow the hose(s) from the extending ram or the opposite side of the ram (MVP PLUS™ blades only) to take fluid back in.

9. Reconnect the angle ram hoses to the proper fittings. Reinstall all protective hose wraps in their original positions. (See the following illustrations for your snowplow type and Hydraulic Hose or Fitting Replacement instructions.)

⚠️ WARNING
Keep 8' clear of the blade drop zone when it is being raised, lowered or angled. Do not stand between the vehicle and blade or directly in front of blade. If the blade hits you or drops on you, you could be seriously injured.
MAINTENANCE

Hose Routing for HTS™ Blades

- To Lift Ram Base
- To PS Angle Ram
- To Lift Ram Rod
- To DS Angle Ram

Hose Routing for MVP PLUS™ Blades

- To DS Rod (Front)
- To DS Base (Rear)
- To PS Base (Rear)
- To PS Rod (Front)
- To Lift Ram
NOTE: On MVP PLUS™ and WIDE-OUT™ blades, add fluid only when all rams are retracted.

10. For straight blades, any angle will do, but MVP PLUS and WIDE-OUT blades must be in the fully retracted (vee) position. With the lift ram fully retracted, fill the reservoir with WESTERN® High Performance Hydraulic Fluid to –40°F (–40°C), or other fluid conforming to Military Specification MIL-H-5606A, such as Mobil Aero HFA or Shell AeroShell® Fluid 4. Replace fill plug.

AeroShell® is a registered (®) trademark of Shell Oil Company.
MAINTENANCE

Air Removal – HTS™ & Straight Blades

11. Turn control ON and completely angle blade to the left and right several times. Turn control OFF.

12. Fill reservoir to top of fill hole and replace fill plug.

NOTE: Loosen fill plug slowly to relieve any pressure in the reservoir.

13. Turn control ON and raise and lower the snowplow several times. Activate control FLOAT function and manually collapse lift ram all the way after each lowering of the blade. Turn control OFF.

14. Fill reservoir to top of fill hole and replace fill plug.

For the HTS™ blades, fill to within 1” from the top of the fill hole and replace the plug.

⚠️ WARNING

To prevent accidental movement of the blade, always turn the ON/OFF switch to OFF whenever the snowplow is not in use. The control indicator light will turn off.
Air Removal – MVP PLUS™ Blades

11. Turn control ON and completely extend and retract the driver-side wing several times. With all rams fully retracted, turn control OFF.

12. Fill reservoir to top of fill hole and replace fill plug.

NOTE: Loosen fill plug slowly to relieve any pressure in the reservoir.

13. Repeat steps 12 and 13 for the passenger-side wing.

14. Turn control ON and raise and lower the snowplow several times. Activate control FLOAT function and manually collapse lift ram all the way after each lowering of the blade. With all rams fully retracted, turn control OFF.

15. Fill reservoir to top of fill hole and replace fill plug.

WARNING
To prevent accidental movement of the blade, always turn the ON/OFF switch to OFF whenever the snowplow is not in use. The control indicator light will turn off.
MAINTENANCE

Air Removal – WIDE-OUT™ Blades

11. Turn control ON and completely extend and retract the driver-side wing several times. Repeat for the passenger-side wing. With the wing and lift rams fully retracted, turn the control OFF.

12. Fill reservoir to top of fill hole and replace fill plug.

NOTE: Loosen fill plug slowly to relieve any pressure in the reservoir.

13. Turn control ON. Angle blade fully left and right and raise and lower the snowplow several times. Activate control FLOAT function and manually collapse lift ram all the way after each lowering of the blade. With all rams fully retracted, turn control OFF.

14. Fill reservoir to top of fill hole and replace fill plug.

**WARNING**

To prevent accidental movement of the blade, always turn the ON/OFF switch to OFF whenever the snowplow is not in use. The control indicator light will turn off.
Hose or Fitting Replacement

**WARNING**

Lower blade when vehicle is parked. Keep 8' clear of blade drop zone. Temperature changes could change hydraulic pressure, causing the blade to drop unexpectedly or damaging hydraulic components. Failure to do this could result in serious personal injury.

**DO NOT** use thread sealant/tape on hoses or fittings. This could damage product. Follow recommended replacement procedures for fittings and hoses.

1. Lower snowplow completely, and turn control OFF.

**NOTE:** Loosen fill plug slowly to relieve any pressure in the reservoir.

2. Carefully note hose routing and positions of any protective hose wraps for proper reassembly.

3. Loosen hoses or fittings slowly to relieve any residual pressure.

4. To remove a hose, loosen and unscrew the hose flare nut from the fitting.

5. To remove a fitting, loosen the jam nut and unscrew the fitting from the port.

**Procedure for Installing Hydraulic Fittings and Hoses**

**NOTE:** Overtorquing JIC hose fitting ends will result in a fractured fitting.

**DO NOT** use any type of sealant or tape on the fittings or hoses. This could damage product. Always use two wrenches to ensure proper tightening of fittings and hoses.
MAINTENANCE

Use the following procedure to install SAE O-ring fittings in valve block and rams:

1. Turn jam nut on fitting as far back as possible.
2. Lubricate O-ring with clean hydraulic fluid.
3. Screw fitting into port by hand until the washer contacts port face and shoulder of the jam nut threads.
4. Unscrew fitting to proper position no more than one full turn.
5. Using two wrenches, hold fitting body in position and tighten jam nut until the washer again contacts port face, then tighten an additional 1/8–1/4 turn to lock fitting in place. Final torque on the jam nut should be approximately 20 ft-lb.

Use the following procedure to install hydraulic hoses:

1. Screw flare nut onto fitting flare and hand tighten.
2. Align hose so there are no twists or sharp bends and so it will not be pinched or pulled by moving parts.
3. Using two wrenches, hold the hose in position and tighten flare nut 1/8–1/4 turn beyond hand tight. Final torque on the flare nut should be approximately 20 ft-lb.
4. Reinstall any protective hose wraps in their original positions.
MAINTENANCE

FUSE REPLACEMENT

The vehicle control harness contains two automotive blade-style fuses. The snowplow park/turn power is covered by a 15-amp fuse. The snowplow control power is covered by a 7.5-amp fuse in straight blades and a 10-amp fuse in HTS™, MVP PLUS™ and WIDE-OUT™ blades. The control fuse is "hot" when the vehicle ignition switch is ON and the electrical connections to the snowplow are completed.

See the Harness Diagram applicable to the electrical system on your snowplow at the end of this manual for fuse ratings and locations.

The MVP PLUS hydraulic unit harness system contains four automotive blade-style mini fuses. The 3-solenoid harness (to Port B on the hydraulic unit module) and 8-solenoid harness (to Port C) each contain two 4-amp mini fuses.

The WIDE-OUT hydraulic unit harness system contains four automotive blade-style mini fuses. The 2-solenoid harness (to Port B on the hydraulic unit module) and 6-solenoid harness (to Port C) each contain two 4-amp mini fuses.

If a problem should occur and fuse replacement is necessary, the replacement fuse must be of the same type and amperage rating as the original. Installing a fuse with a higher rating can damage the system and could start a fire.

VEHICLE

The snowplow operating vehicle shall be maintained according to manufacturer's recommendations. Tire pressure shall be maintained according to manufacturer's recommendation.
MAINTENANCE

RECYCLE

When your snowplow has performed its useful life, the majority of its components can be recycled as steel or aluminum. Hydraulic fluid shall be disposed according to local regulations. Balance of parts made of plastic shall be disposed of in a customary manner.

BLADE FINISH

If the powder-coated finish is nicked or scratched, repair the blade surface with WESTERN® red or black paint in aerosol or quart can from your WESTERN outlet. Clean and repaint parts as necessary.

EMERGENCY PARTS/TOOLS

We suggest that you keep a WESTERN Emergency Parts Kit (PN 67880 for straight blades, PN 69600 for HTS™ blades, PN 44796 for MVP PLUS™ blades and PN 50687 for WIDE-OUT™ blades) in your vehicle. These kits contain WESTERN hydraulic fluid, dielectric grease, common hoses, pins, clips, fasteners and a motor relay.

Also keep the following items in your vehicle for emergency use:

- 10" Adjustable Wrench
- Pair of Pliers
- Medium Screwdriver
- Miscellaneous Fasteners

Always use WESTERN designed and tested replacement parts.
TROUBLESHOOTING

If you have followed all of the guidelines in the Maintenance Section of this manual and cannot resolve issues with the operation of your WESTERN® snowplow, contact one of our authorized outlets for repair information, or visit us online at www.westernplows.com. Our Web site has a complete listing of authorized outlets in your area as well as a complete library of parts lists, mechanics guides and service information to assist the qualified mechanic with repair.

Western Products does not recommend repairs by other than our factory-trained outlets. Failure to use an authorized outlet could affect the warranty coverage on your snowplow.
